

# Linux Environment Variable

1. State the command for the following.

a. view current environment variables

Ans: `printenv`

b. display the PATH environment Variable value

Ans: `echo $PATH`

c. update PATH to include the path to your home directory

Ans: `export PATH=$HOME:$PATH`

2. How will you make the environment changes applicable to all users? Which script is to be modified?

Ans: `sudo nano /etc/profile`

3. I have installed an application named "myapp". After installation, if I invoke the application, it fails with error as "Command myapp not found". How will you fix this?

Ans: add the location of application to the PATH
